

Contract Name: Harvard CNC Renovations

Contract Number: 4600052277

Order Number: 4501793742

I MP Ditlhakanyane , has been appointed as the Project Manager for the abovementioned project awarded to Ngishilo Trading and Projects.

The brief summary behind the renovation is as follows:

To upgrade the existing facilities at Harvard Substation in order to accommodate the large number of learners, GIT's and employees who are in serious need of hands-on training. Harvard is in the central part of the Free State and easy assessable. Training can be provided close to the home base and employees don't need to travel long distances and be away from home for too long periods of time. The upgrading of these existing premises will provide a high level of field simulation where trainees and employees will have the opportunity to obtain training on equipment similar or even exactly the same as which will be found in the field on the network. Training will be provided and overseen by experienced field staff currently based in Bloemfontein and surroundings. This can be provided at a relative low cost due to the exclusion of traveling and accommodation cost for the trainers. The equipping of two board rooms in the same building can also be a solution to remove all technical training venues that are currently taking place in the main office building.

The team had all the elements of the trades required to realise our goal, and they did an excellent job in illustrating them through their workmanship. Their knowledge with regard to our drive to zero harm that's what really impressed us as well as their team work that was prevalent.

The above serves as the gratitude felt towards the work that Ngishilo Trading and Projects did for us.

Thank you

MP DITLHAKANYANE
